

PORTFOLIO

Amy Phuong Vi

GRADUATE FRONT END DEVELOPER

Bio

I am an ICT graduate and Front End Developer.

I am a keen and fast learner that seek to extend my skills in developing web through the usage of coding and database implementation.

My coding languages learnt from prior experiences are primarily: HTML/CSS, JavaScript and Java. This portfolio is intended as a showcase of works I have completed within the field of web development and application prototyping.

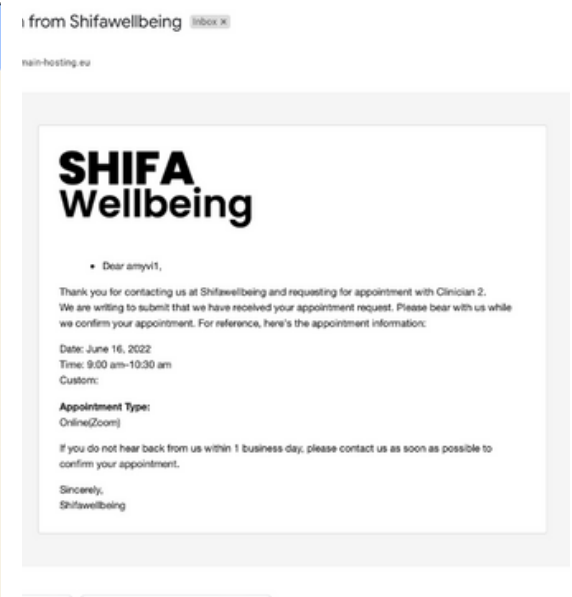

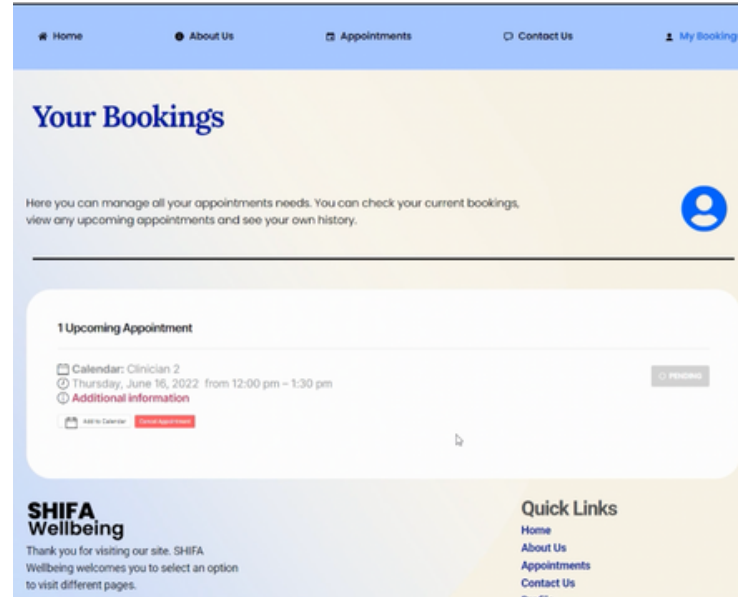

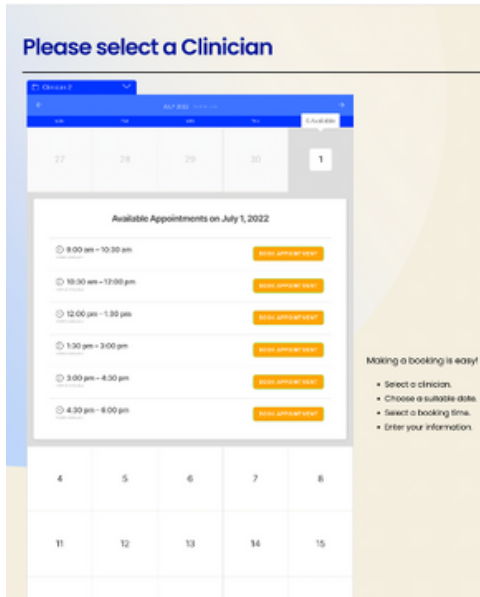

Work

Mobile Application Prototypes

I have individually worked on a prototype using the prototyping tool JustInMind for a UI/UX project in uni. My prototype is based of a wellness application that promotes organised schedules and habit-forming. The main design features include the use of pastel colour scheme in setting the right ambience for users of a wellness app. I also focus on UX by promoting customisation options to accomodate users of their personal preferences while working on the prototype.

02

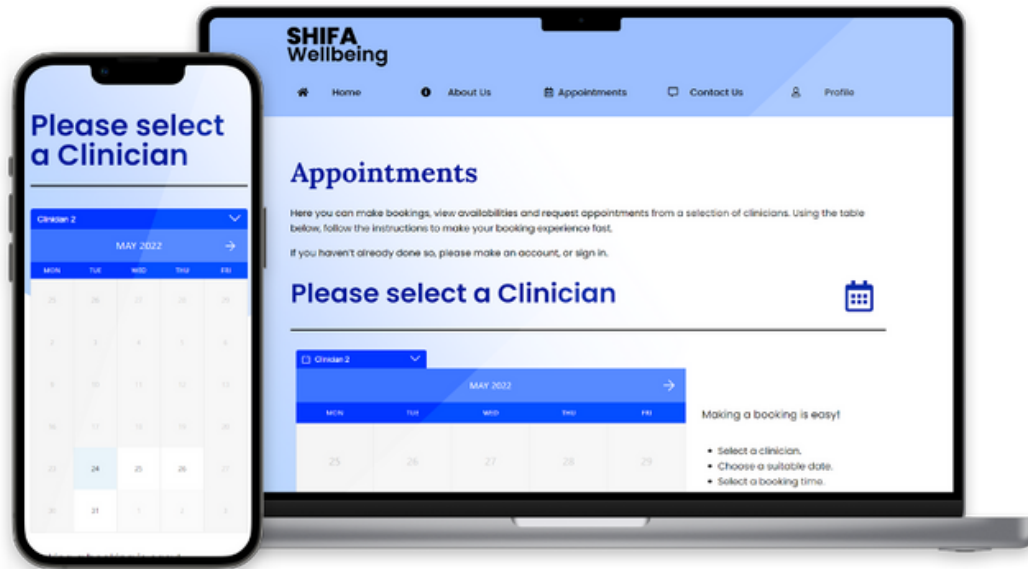

Web Developing Group Project

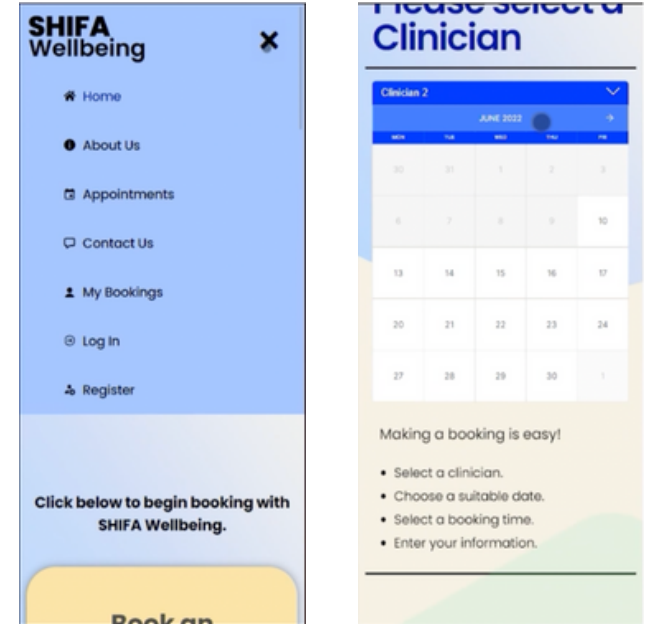

I have worked in a group of 5 for a university project where we're required to consult with our client which is a local clinic to create a simple, thoughtful and approachable appointment scheduler website. As due to our client's preference of using WordPress, we have developed the website for a period of 1 month using WordPress alongside plug-ins and mySQL for database to secure user's data.

Work

03

Note: Website domain no longer public
due to client requests for private use

The website look on mobile version.

Thank You!
